Office Action Summary

1. Applicant's correspondence filed on 2 July 2001 (paper #5) has been received and considered.
Claims 1-10 are pending.

Response to Arguments

2. Applicant's arguments against the Schwelb reference are misplaced. The elements that the
5 applicant alleges are missing are clearly anticipated by Schwelb. The applicant is urged to read the
reference. See, in particular, figure 3 which clearly shows a voice synthesizer 64 as part of the mobile
station 16. The applicant is also urged to read column 1 which clearly teaches that the device can be
used by visually impaired users. The applicant is also urged to read column 4 which indicates use in
a vehicle for sighted persons. It is inherent that a user would not need to use their hands while
10 exchanging audible messages to and/or from the device of Schwelb. Alternatively, it is inherent that
when text is audibly presented, there would be no need for the user to operate the device with their
hands as there would be to scroll through a text message. Furthermore, in column 6, lines 62-65,
Schwelb teaches that visually impaired user is audibly made aware of sub-area change related
information such as: entry into a new location area; a change in cellular service providers; or, a rate
15 change for cellular calls. This notification is automatic and does not require users to manipulate
anything with their hands. Thus, these messages are delivered hands-free.

The well known use of speech recognition in a telephone environment is addressed with Maui.
The applicant's arguments regarding claim 5 are also misplaced. Claim 5 is radically different than
claim 1 because it requires the use of speech recognition which is not contained in claims 1 or 8. The
20 applicant's failure to recognize this difference is not understood.

The applicant's arguments regarding an "alarm signal" are vague. Any communications

device such as a cellular telephone is inherently capable of transmitting any kind of audible signal representing any type of information that human beings may want to communicate to one another.

In particular, the text messages that are converted by Schwelb would clearly anticipate alarm signals such as those normally transmitted by text. One could interpret the ringing of a telephone or pager (Schwelb, col. 3, lines 60-64) as alarm signals that even those of less than ordinary skill in the art would recognize.

The applicant failed to present any arguments against Klatt which indicates that the applicant acknowledges that the use of known speech synthesis techniques such as Klatt's are well known as previously set forth by the examiner.

Therefore, the applicant has failed to overcome the previous rejections under 35 USC 102 and 103 of the Office Action mailed 28 March 2001 (paper #4). The applicant is referred to paper #4, paragraphs 3-8 for the explanation of these rejections in combination with the response above.

3. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory

period for reply expire later than SIX MONTHS from the mailing date of this final action.

4. **Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks
Washington, D.C. 20231

5 **or faxed to:**
